

Parker SNAP-TITE 71 Series Summary.....	46-47
71 Series – Buna Seal.....	48
71 Series – Viton Seal.....	49
Parker SNAP-TITE 71 Series Working Pressures..	50
71 Series – Dust Protection.....	50

HIGH PRESSURE, PUSH-TO-CONNECT, NON-SPILL, DRY DISCONNECT, QUICK RELEASE COUPLINGS

Parkers SNAP-TITE 71 Series is a range of fittings that is both a dry disconnect and a quick release coupling. Its unique design offers many advantages and it is one of the highest 'pressure rated' fittings (up to 10,000PSI.) of its kind within either range.

The flush face provides a connection, which will not spill valuable or hazardous media when connected or disconnected, with minimal air inclusion. This provides one of the safest, cleanest and most cost-effective fluid transfer solutions.

The large flow chambers in the body and an exclusive valve design guarantee a superior flow but also allows for low-pressure drop to be maintained at the same time.

With a push-to-connect mechanism, the 71 Series equips the user with an easy and quick installation with no need for the use of any tools. This means any operative is able to connect and disconnect lines, without prior training or a great deal of strength. This is a fitting that will streamline any production line and increase productivity, with less time wasted waiting for changeovers.

With heavy-duty construction, Series 71 fittings are robust and can withstand the high pressures required by applications such as hydraulics and chemical transfer. It's durable and will last longer, meaning it will save money on the lifetime of fitting with less replacements and less factory downtime as a consequence.

FEATURES & BENEFITS

- Available with a Sleeve Lock design to protect against accidental connection
- Available with Autoclave cone and threaded fittings
- Versatility

APPLICATIONS

- High Pressure Hydraulics
- Offshore Oil & Gas
- Chemicals
- Pharmaceuticals
- Test Stands

TECHNICAL SPECIFICATION

- Materials
 - Steel, Zinc trivalent plating
 - 316 Stainless Steel
 - High Pressure Stainless Steel

- Pressure: Up to 10,000 PSI (689 Bar)
- Sizes: 1/4" to 2"
- Flush Face DryBreak
- Push-to-Connect

SUMMARY

PARKER SNAP-TITE 71 SERIES is both a Dry Disconnect and Quick Release Coupling. Its FLUSH FACE provides one of the safest, cleanest and cost-effective fluid transfer solutions. Its Large Flow Chambers offer superior delivery and with a push to connect mechanism is easy and quick to install/uninstall.

It has one of the 'highest pressure' ratings for this type of product (10,000 PSI) and due to it's heavy-duty construction, it is more durable, with a longer life making for less replacements and downtime.
